

The Comet Shoemaker-Levi multiple impacts on Jupiter (upper left) and the Chesapeake Bay (90km 35my) (right) and Montagnais (45km 51my) craters discovered in the course of oil exploration

1024x1024 Near-Infrared Camera  
University of Hawaii 2.2-meter telescope

Shoemaker-Levi, spectacular evidence of multiple impacts from a single body (thought by some 'experts' to be nearly impossible until it was actually observed!)
